

# INFITECH USA

## Job Information

Provide onsite support for installation and modification for state-of-the-art semiconductor manufacturing/processing equipment

Job Responsibilities encompass performing tool modifications and or installations either solely or as part of a larger team. The modification scope varies from basic changes to very complex mods requiring significant changes to tool hardware and software. Safety is paramount and must be the #1 priority. Job quality and adherence to schedule are vital.

Strict adherence to documented procedures is mandatory. Advanced candidates should be able to troubleshoot and resolve unanticipated problems and take countermeasures in an expedient manner. Proper judgment regarding when to escalate issues with our customer and to the end-customer is a 'must'.

Work schedule flexibility is required as customer schedule requirements may include weekend or night shift support when needed. 100% travel ability to other project locations are strongly desired in the event work is slow at Hillsboro.

Anticipated Tasks (examples):

Install / Mod FSE 1:

Safety Assistant

PTP and Lockout / Tag out implementation

Wire / harness routing and connection

Tube / piping routing and terminating (flare / threaded fittings)

Install / Mod FSE 2:

All items associated with Install / Mod FSE 1

Basic Wets system operation including manual operation of flow systems

Verification of system status to begin maintenance

Chemical loop component replacement (i.e. valves, filters, pumps, etc)

Leak / operational checks of chemical / DIW flow systems

Install/Mod FSE3:

All items associate with Install/Mod FSE1& 2

Desired Qualifications:

Ideal candidates will have previous experience maintaining, installing, and or modifying wet processing equipment in a fab environment. Their ability to apply their knowledge and accelerate their learning curve on customer toolsets will be monitored. Top candidates will progress quickly and be assigned to more complex mods in a shorter time.

Entry level candidates must demonstrate full knowledge of all safety protocols before working on wet cleaning tools in a fab environment though we prefer all candidates to have worked at the Intel plant at some point.

Candidates should have experience using basic tools (e.g.; micrometers, calipers, multi-meters, current clamp, etc.) and the ability to read schematics/plumbing diagrams. They must be able to follow detailed oral and written procedures. Excellent communication, documentation, troubleshooting, and customer service skills are necessary. Candidates must be proficient with MS Office programs.

All candidates must be able to pass customer background checks, medical tests, and certification/training for respirator use.

Language skill requirement or preference: Able to speak Japanese preferred. Able to read Japanese preferred. Able to write Japanese preferred. Able to speak Korean preferred. Able to read Korean preferred. Able to write Korean preferred.
